# WET WIPE MANUFACTURERS!

Still waiting for batches to mix?

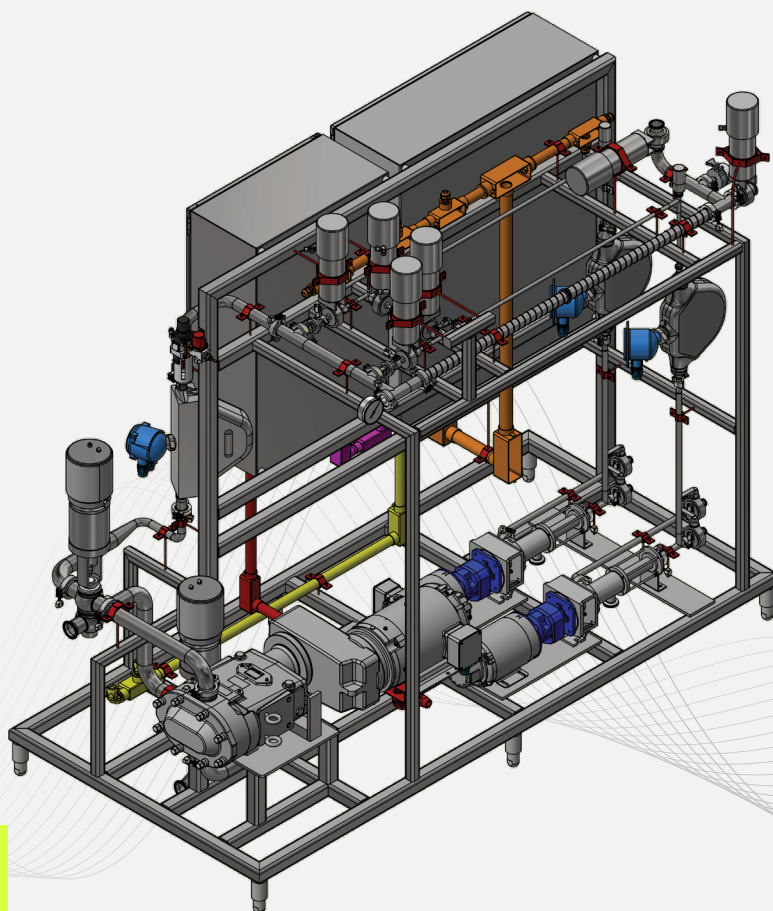

Produce more in less time with a PureWipe Inline Blending System.

**Wet wipes of all kinds are in high demand. Are you keeping up with production?**

Increase your capacity and save hundreds of hours over batch processing.

With the PureWipe Inline Blending System from OptiFlow Systems, wet wipe manufacturers can expect:

- Consistent product
- Fewer hours lost on tasks like agitating batches
- Increased production capacity

**START PRODUCING MORE IN LESS TIME.**

# PureWipe (Wet Wipe) Skid System

## Automated chemical blending system for wet wipes.

The PureWipe skid system provides liquid solutions for wet wipe products. PureWipe is a self-contained skid mounted system that automatically makes down ingredients and formulates custom recipes of wet wipe solutions. Applications vary from repeatable recipes with few components to a wide range of recipes with multiple components and consistencies.

The PureWipe skid system utilizes PLC based process control to provide precision injection and sequencing along with homogeneous mixing of ingredients. Each batch records and verifies ingredient consumption and mix times before being transferred to the day tank. An optional CIP (clean in place) system is also available to prepare the PureWipe for shut down between production runs.

### Features/Benefits

- Custom UL Listed Control Panels - Optional Panelview touch screens provide an easy-to-use interface
- Sanitary Design and Construction - Easy to clean equipment means more time making product
- Ergonomical - Designed to minimize operator fatigue and discomfort
- World Class Components - Our distributor status allows us to source the best equipment at the lowest market prices
- Easy Serviceability - Easily access what you need without obstructions
- Quality Materials - Selected for each application to ensure chemical compatability and long equipment life

## Additional Sanitary Services

We're more than a skid system builder. Take a look at other ways we help manufacturers ensure cleanliness in their processes.

- CIP system optimization
- Continuous and batch process design
- Sanitary equipment and facility audits
- Qualification and validation support
